

What changed in this drop

Build 343 adds the Sales ScoreCard page and dashboard callout. Sales is always the first card on Operational Heartbeat. Loss Revenue is always second. Health on Sales is Sales YoY %: over 0% is Healthy, flat is Watch, below 0% is At Risk. After you update, reload the master workbook so Sales numbers refresh.

Update Heartbeat in TestFlight

1 Open TestFlight from the Home Screen

Find the TestFlight app on the iPad Home Screen and tap it. Do not open the old Heartbeat icon first — update inside TestFlight so you get Build 343.

2 Tap Update on Fulfillment Heartbeat

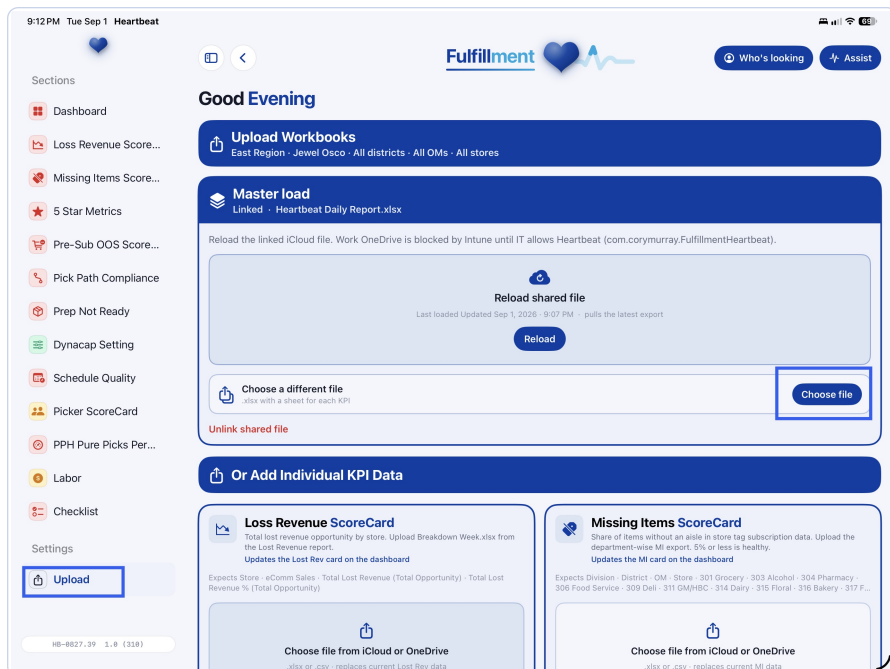

On the TestFlight app page, confirm Version 1.0 Build 343. Tap Update. When it finishes, open Heartbeat. The sidebar stamp must read HB-0827.72 1.0 (343). If it shows an older stamp, tap Update again.

Reload the master file

New Sales data does not appear until you load the workbook again. Use the master Excel file that includes a tab named exactly Sales. You can also use the individual Sales upload card. Prefer iCloud Files if OneDrive fails on a work iPad.

3 Go to Upload and tap Choose file or Reload

Heartbeat opens on Upload when no file is loaded. If data is already in the app, open Upload from the menu, then tap Choose file or Reload on Master workbook.

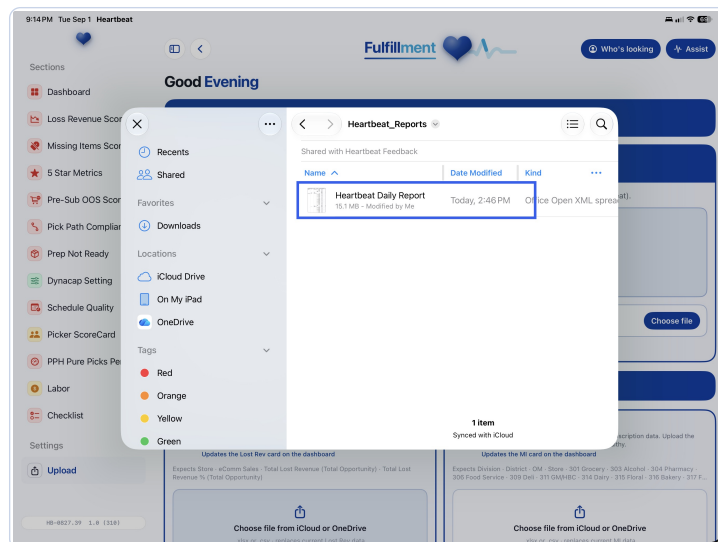

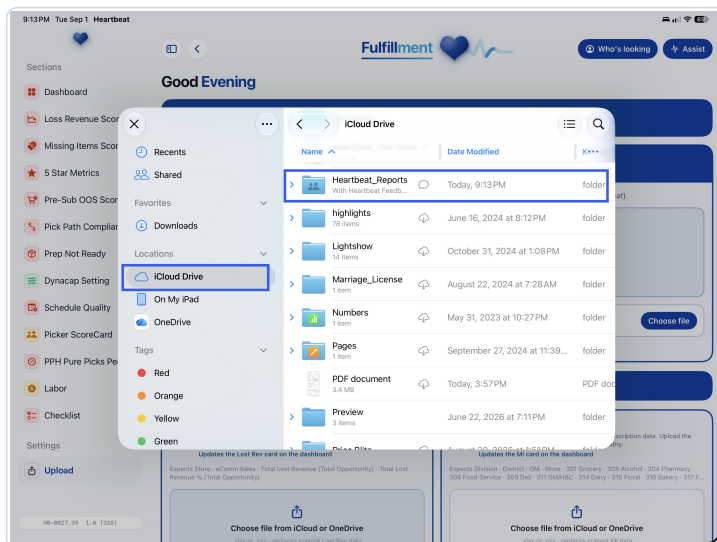

4 Open Files and pick the shared folder

In the iOS file picker, choose iCloud Drive (or the folder that was shared with you). Open the Heartbeat folder that holds the master workbook.

Select the workbook

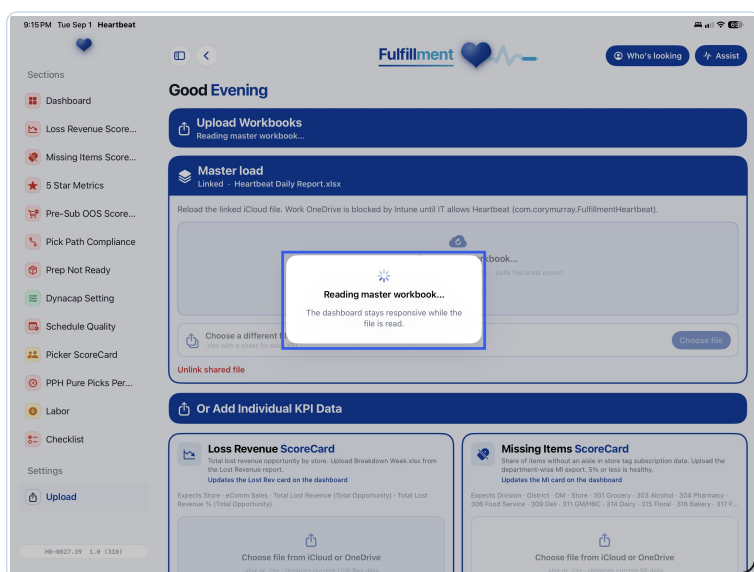

5 Tap the master Excel file

Select Heartbeat Master Week 27.xlsx or the current week file your team posted. The Sales tab name must be Sales. Individual Sales exports also work from the Sales card on Upload.

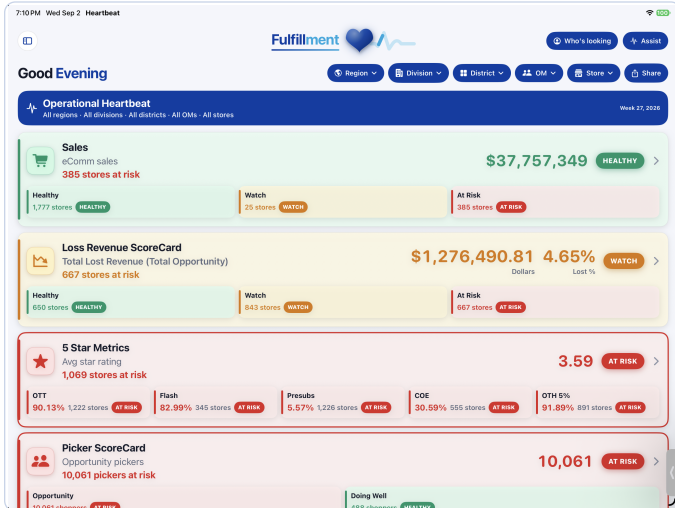

6 Wait for Reading master workbook

Keep the iPad awake until the banner says the file is loaded. Then Who's looking appears. Pick your role. Company view shows every store. Region, Director, District, and OM views show only your scope.

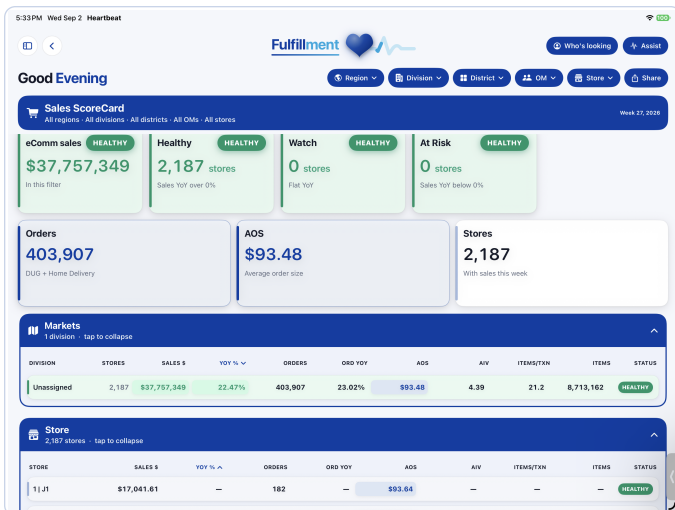

New: Sales ScoreCard

Dashboard order is Sales, then Loss Revenue, then the rest. The Sales card uses Total Sales \$ from the export Total column. Open Sales ScoreCard for week totals, YoY, orders, AOS, AIV, items, and tap a store to see Sunday through Saturday.

Sales ScoreCard page — markets and stores. Status follows Sales YoY %. Empty Unassigned market rows are hidden. Reload data if Sales still shows the previous week.

Master file tab names

Sales · Lost Revenue · Missing Items · 5 Star · Pre-Sub OOS · Pre Sub OOS Item · Pick Path · Aisle Mapper · Prep Not Ready · Dynacap · Schedule Quality · Picker ScoreCard · PPH · Labor
