

Version for this drop

Version 1.0 · Build 374 · HB-0828.03. Sidebar stamp after update must read HB-0828.03 1.0 (374). This build is for iPhone, iPad, and Apple silicon Mac.

What changed

Heartbeat now runs on MacBook with the same iPad layout. Master load shows X of 15 scorecards and names any missing tabs. The large Picker ScoreCard sheet is no longer skipped. Sheets read one at a time so iPhone 14 does not quit mid-file. Dashboard callouts stay collapsed by filter: company shows regions and markets, division shows districts and stores, OM shows stores. Who's looking sits left of Filters. Assist is the blue button. Share email uses Apple Mail with stacked store cards so columns are not cut off.

Update on iPad or iPhone

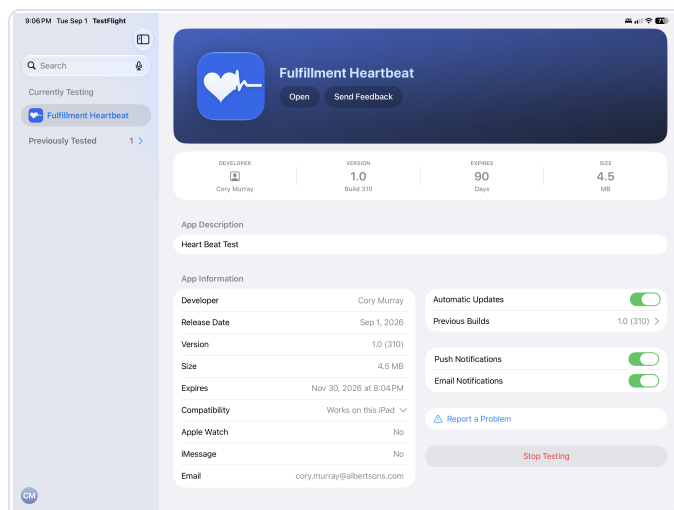

1 Open TestFlight from the Home Screen

Tap TestFlight first. Do not open the old Heartbeat icon until Update finishes.

2 Tap Update on Fulfillment Heartbeat

Confirm Version 1.0 Build 374. Tap Update. Open Heartbeat and check the sidebar stamp HB-0828.03 1.0 (374).

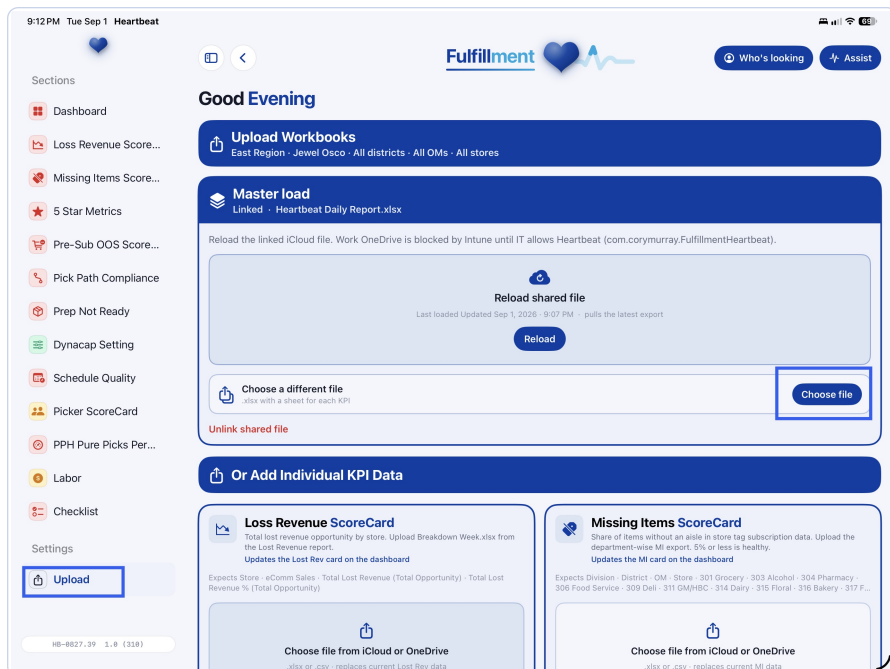

Reload the master file

New code does not change numbers until you load the workbook again. Use the current week master Excel. Prefer iCloud Files if OneDrive fails on a work iPad.

3 Go to Upload and tap Choose file or Reload

Heartbeat opens on Upload when no file is loaded. If data is already in the app, open Upload from the menu, then tap Choose file or Reload on Master workbook.

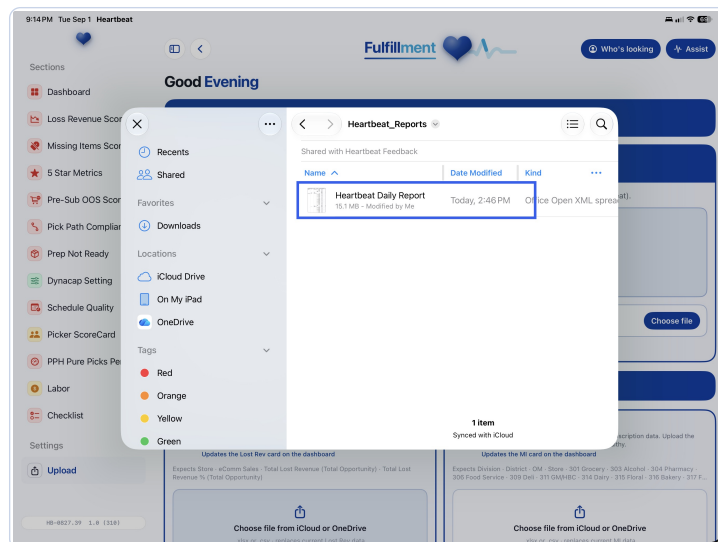

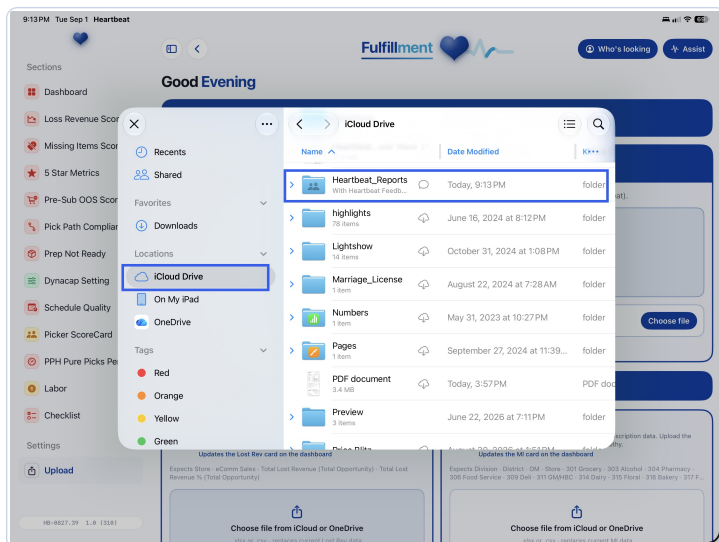

4 Open Files and pick the shared folder

In the file picker, choose iCloud Drive or the folder that was shared with you. Open the Heartbeat folder that holds the master workbook.

Select the workbook

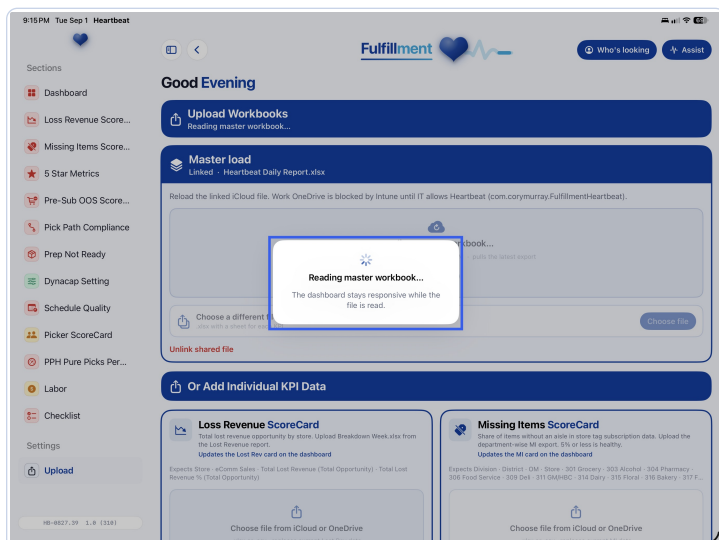

5 Tap the master Excel file

Select Heartbeat Master Week 27.xlsx or the current week file. Individual cards still replace one KPI if you are patching one tab.

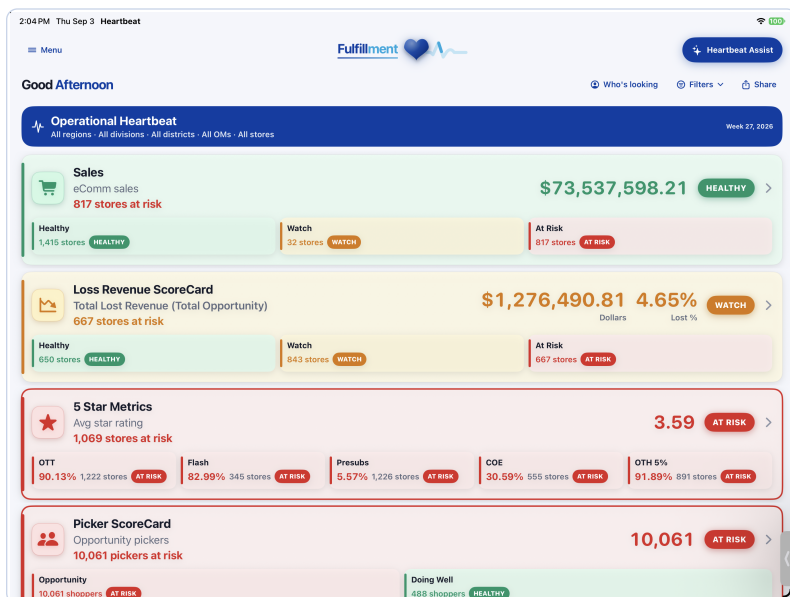

6 Watch X of 15 scorecards

The popup counts loaded tabs. Picker ScoreCard is the large sheet and takes the longest. If a tab is missing it is listed in red. Stay in the app until Who's looking appears.

Dashboard and header

Callouts stay Sales then Loss Revenue first. Under each card, tap the collapsed row to open regions, markets, districts, or stores for the current filter. Menu is on the left. Assist is the blue button on the right.

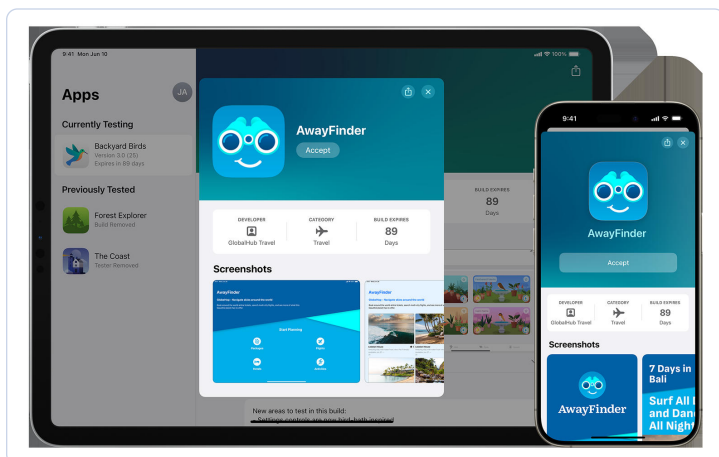

Share email

Share uses Apple Mail only. Pick Dashboard, all pages except Checklist, or individual pages. Every store in the filter is a stacked card so numbers stay on the page.

Now available on Mac computers

Apple silicon MacBook (M1, M2, M3, M4) installs the same TestFlight build. Layout matches the iPad. Intel Macs need the Mac Catalyst archive when that build is posted. Use the same Apple ID that received the tester invite.

7 Install TestFlight on the Mac, then Heartbeat

Mac App Store → search TestFlight → Get. Open TestFlight → accept Heartbeat → Install. Confirm Version 1.0 Build 374. The window opens at iPad size. Load the master file from iCloud Drive the same way as the iPad.

- 1 **Open the Mac App Store**
Search TestFlight and click Get / Install.

- 2 **Open TestFlight on the Mac**
Sign in with the same Apple ID used on your iPad invite.

- 3 **Open the Heartbeat invite**
Use the email invite or the app already listed under Apps.

- 4 **Install Fulfillment Heartbeat**
Confirm Version 1.0 Build 374, then click Install / Update.

Master file tab names (15)

Sales · Lost Revenue · Missing Items · 5 Star · Pre-Sub OOS · Pre-Sub OOS Item · Pick Path · Path Picker · Aisle Mapper · Prep Not Ready · Dynacap · Schedule Quality · Picker ScoreCard · PPH · Labor

Confirm the build

Sidebar stamp must read HB-0828.03 1.0 (374) on iPhone, iPad, and Mac. If it does not, open TestFlight and tap Update, then reload the master file.

If a scorecard is missing after load

The popup lists the missing tab names. Add that exact tab to the master workbook or use the individual upload card. Picker ScoreCard must be named Picker ScoreCard or Picker ScorCard.
