

What changed in this drop

Build 366 is the TestFlight drop after the Sales ScoreCard launch. Dashboard callouts now have a collapsed Regions / Markets / Districts / Stores row that follows your filter. Share email lists every filtered store as a readable card. Master upload is faster and safer on iPhone 14. After you update, reload the master workbook so every tester is on the same file.

Update Heartbeat in TestFlight

1 Open TestFlight from the Home Screen

Find the TestFlight app on the iPad or iPhone Home Screen and tap it. Do not open the old Heartbeat icon first — update inside TestFlight so you get Build 366.

2 Tap Update on Fulfillment Heartbeat

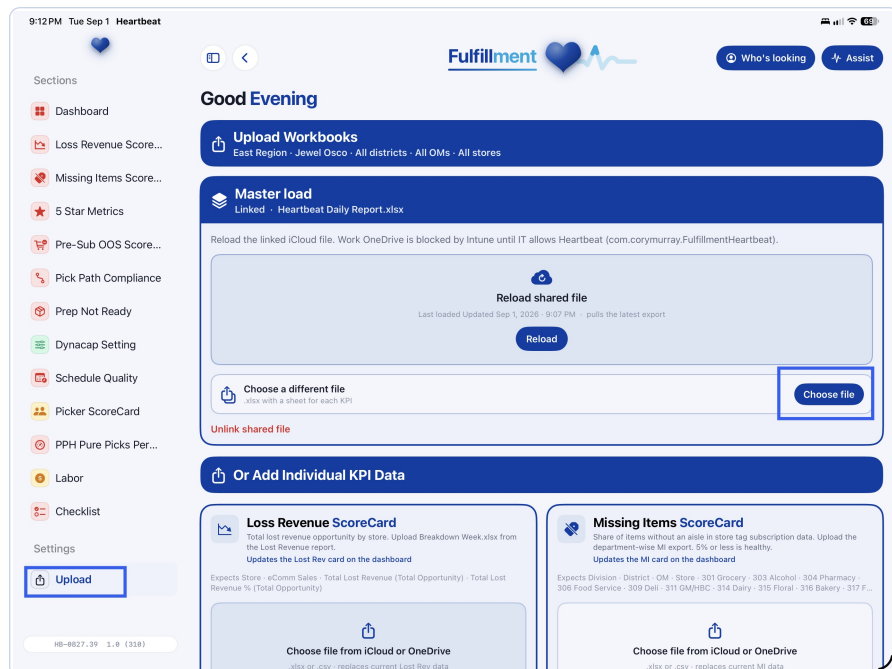

On the TestFlight app page, confirm Version 1.0 Build 366. Tap Update. When it finishes, open Heartbeat. The sidebar stamp must read HB-0827.95 1.0 (366). If it shows an older stamp, tap Update again.

Reload the master file

New code does not change numbers until you load the workbook again. Use the current week master Excel. Tab names must match the list on page 5. Prefer iCloud Files if OneDrive fails on a work iPad. Keep the device awake while it reads.

3 Go to Upload and tap Choose file or Reload

Heartbeat opens on Upload when no file is loaded. If data is already in the app, open Upload from the menu, then tap Choose file or Reload on Master workbook.

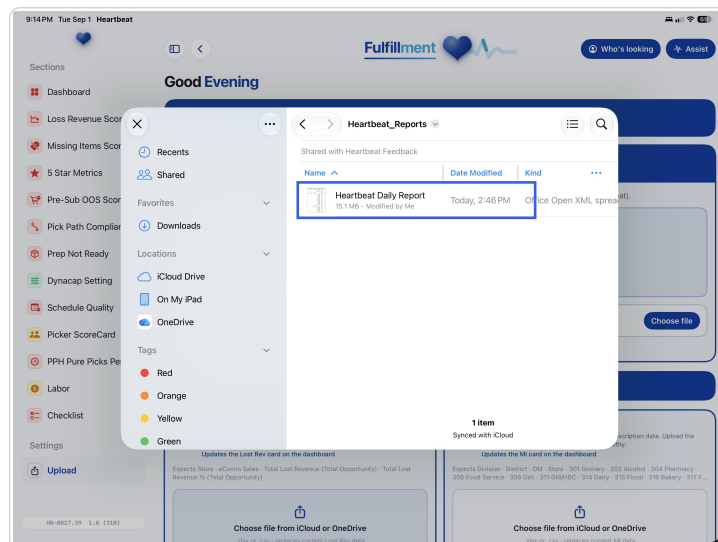

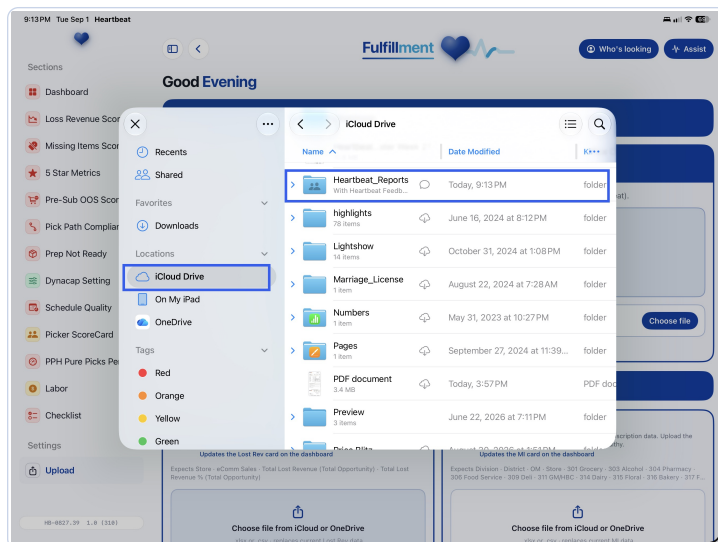

4 Open Files and pick the shared folder

In the iOS file picker, choose iCloud Drive (or the folder that was shared with you). Open the Heartbeat folder that holds the master workbook.

Select the workbook

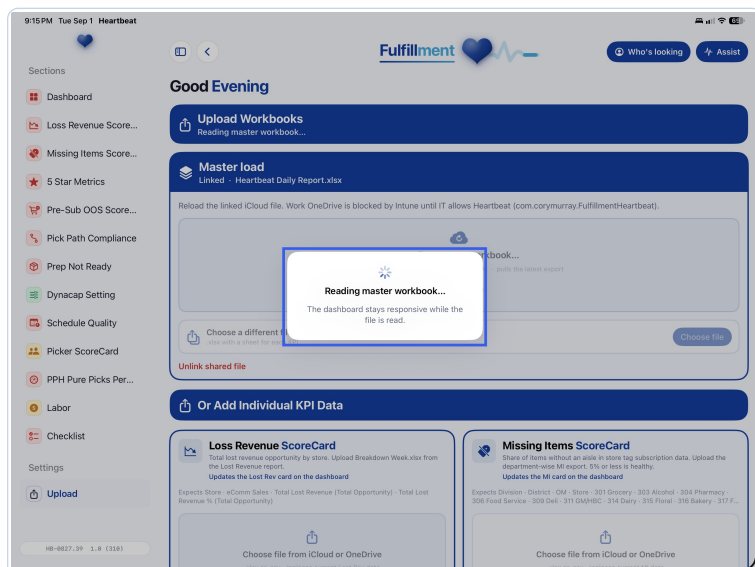

5 Tap the master Excel file

Select Heartbeat Master Week 27.xlsx or the current week file your team posted. Individual scorecard exports still work from their cards on Upload if you are patching one tab.

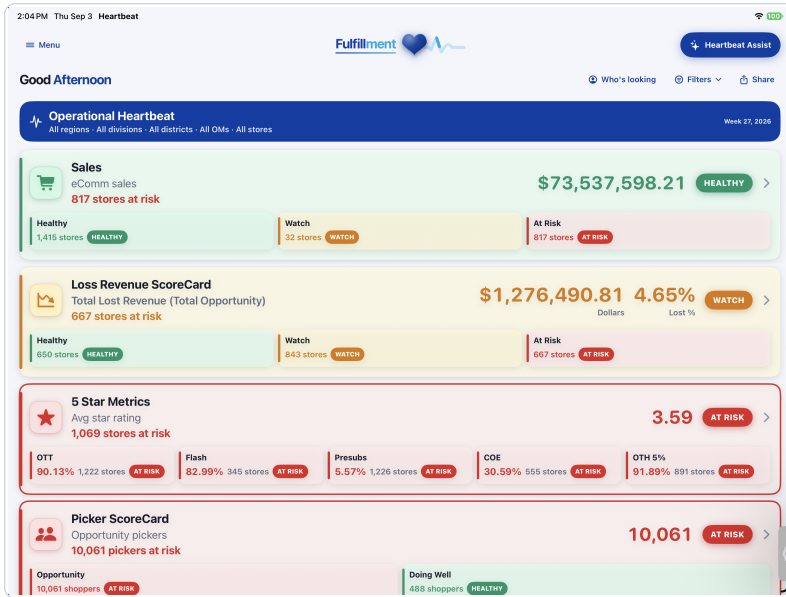

6 Wait for Reading master workbook

Keep the device awake until the banner finishes. Who's looking appears next. Pick your role. Company view shows every store. Region, Director, District, and OM views show only your scope. iPhone 14 testers should stay in the app until the role screen appears — do not force-quit mid-read.

Dashboard callouts follow the filter

Each scorecard card on Operational Heartbeat now has a collapsed row under the metrics. All filters show Regions (tap a region for its markets). A Division filter shows Districts (tap a district for stores). An OM, district, or store filter shows Stores. Rows stay closed until you tap them.

Cleaner header

Menu is on the left. Heartbeat Assist is the blue button on the right. Who's looking sits to the left of Filters and Share. Filters opens one sheet for Region, Division, District, OM, and Store. Clear still wipes the whole set.

Share email and device notes

Share uses Apple Mail only. Pick Dashboard, all pages except Checklist, or individual pages. The email lists every store in the current filter as a stacked card: store | district | market, status, then the metrics for that page. Wide tables no longer clip off the right edge of Mail.

Load speed and iPhone 14

Master upload reads one sheet at a time so the iPad stays cooler and iPhone 14 does not quit mid-file. The role screen can appear before picker extras finish. If Sales or a scorecard looks empty after load, tap Reload on Upload once. Do not start a second import while Reading master workbook is showing.

Master file tab names

Sales · Lost Revenue · Missing Items · 5 Star · Pre-Sub OOS · Pre Sub OOS Item · Pick Path · Aisle Mapper · Prep Not Ready · Dynacap · Schedule Quality · Picker ScoreCard · PPH · Labor

Confirm you are on this build

Sidebar stamp must read HB-0827.95 1.0 (366). If it does not, open TestFlight and tap Update, then reload the master file.
